

### Testimonial for Handle Hygiene Sanitizing System

At the Royal Victoria Eye and Ear Hospital, we appreciate the importance of good hygiene and in our efforts to achieve the highest possible standards, we consider it important to evaluate the efficacy of innovative hygiene products that are presented to us from time to time.

It was with this in mind, that we decided to test the Handle Hygiene Sanitizing System, a simple mechanical mechanism that operates with the opening / closing of the door and atomizes a light mist of sanitizing fluid onto the door handle, killing germs and reducing the risk of cross contamination, especially onto clean hands, the bedrock of good hygiene.

The test results and the positive feedback from staff, patients and visitors alike, ensured we proceeded further and we have subsequently introduced the system in a number of strategic locations throughout the hospital.

Given the results of the tests carried out on the door handles within our Hospital, I would recommend the use of the Handle Hygiene Sanitizing System in all Health Care facilities or indeed in any premises where hygiene is paramount.
